National Water Company (NWC), Makkah region (NWC) intends to execute the short-term upgrade of Urana sewage treatment plant. These upgrade works are a high priority for NWC which need to be completed and commissioned prior to the start of the next Hajj season.

In order to accommodate the increased flows at Urana STP, NWC has developed a short-term and a long-term strategy. In the first phase, through this tender document, NWC’s objective is to implement the short-term upgrade strategy. The work includes the design and supply and installation of all that it takes to execute the works that are part of this contract, including the temporary, additional, and complimentary works as well as the modifications that the client requests from the contractor, as per the client’s conditions. The contractor has to coordinate with all relevant authorities for the works to be done. This volume includes the special conditions and the NWC standard specifications, in addition to additional specifications.

**Project: Design and implement short-term solutions to improve the efficiency of the sewage treatment plant in south Makkah.**
